APS Intellectual Property Rights Policies

The American Phytopathological Society

PREAMBLE
The United States Constitution promotes the furtherance of science by granting scientists the exclusive right to their own writings and discoveries. This protection ensures appropriate distribution, use, and financial recompense for copyrighted works. Copyright protects expressions (not ideas or facts), including publications, pictures, graphics, performances, recordings, databases, and software. All media are protected, including digital and online.

APS is a scientific publisher. It publishes information concerning plant pathology, related subjects, and the society itself through copyrighted journals, books, image collections, press releases, reports, meetings, digital media, the website, and other vehicles as warranted. In addition to the service these publications provide, they also generate the bulk of the society’s revenue. Although a nonprofit, APS derives more than 80% of its total income from the sale of its copyrighted materials. This revenue funds many activities of the society in addition to the publications themselves.

In 1999, the ad hoc Intellectual Property Rights Committee (IPRC) was charged to advise APS and its relevant publications boards regarding appropriate policies for copyright and for use of the society’s copyrighted holdings. The committee was to take into account the societal goals and objectives defined in the society’s strategic plan, namely, to “become the premiere resource for plant health information and knowledge dissemination (and) the foremost Internet resource for all aspects of plant health.” In addition, the policies were to assure reasonable access to and use of materials by both their original contributors and the society’s members and clientele while protecting or enhancing APS’s financial health. Intellectual property rights policies will be monitored and modified periodically by the APS Publications Board as appropriate.

INFORMATION FOR AUTHORS
• As a general rule, APS will publish only original new material that has not been previously published. However, informal distribution of preliminary information, such as on personal websites, is allowed and, unless on a bona fide peer-reviewed site, is not considered publication. Subsequent to publication, authors may post abstracts or summaries of their work online. In cases in which the final publication is available on the APS website, these summaries or abstracts may be hyperlinked directly to the complete document or file. Since 2002, authors have been allowed to purchase edited and formatted PDFs of their journal articles for a fee. Authors may post these PDFs on their university or company websites. Authors may post the original unedited, unformatted, peer-reviewed versions of their articles on their university or company websites at no charge. The preferred option is for an author to post his or her article’s abstract and citation on his or her university or company website with a link back to the APS journal source.
• To enable publication, authors may choose from among several copyright options.
Most authors choose to transfer copyright of their work to APS. APS having copyright accomplishes three things: 1) it makes it explicitly clear that APS has a right to publish the material; 2) it allows APS to act as a central clearinghouse for all permissions to reproduce the material; and 3) it assures the financial integrity needed to sustain APS’s publications programs. A second option for some authors is public domain; materials generated as part of the work by employees of the United States government are published in the public domain. APS offers a third fee-based option for journal authors who wish to allow open access to their work: a Creative Commons license.

- An author who transfers copyright to APS may continue to use his or her original materials without obtaining written permission from APS in his or her other personal publications and work that, in the view of APS, will not diminish the sale of any APS publication.
- APS has authority to include all the materials for which it has acquired copyright in the publication to which they were originally submitted in all future editions and adaptations of that publication and in any other new APS publication or medium (including image collections and nonprint media) that it deems appropriate. If substantial portions of any publication are used in a new publication or medium, either the original author or the volume editor will be notified. APS copyright extends to publication throughout the world, in all forms and media, and in all languages.

INFORMATION FOR USERS

General Provisions

- All APS copyrighted materials must be used in accord with current United States and international copyright law, except as specifically stated or licensed otherwise by APS. These copyright restrictions apply to publications in all media, including print and nonprint.
- APS copyrighted materials may not be duplicated in any way without written permission from APS except as provided for by fair use. In determining fair use, these four criteria must all be appropriately satisfied: 1) the purpose and character of the use, including whether such use is of a commercial nature or is for nonprofit purposes; 2) the nature of the copyrighted work; 3) the amount and substantiality of the portion used in relation to the copyrighted work as a whole; and 4) the effect of the use on the potential market for or value of the copyrighted work. APS considers the limited distribution of limited amounts of material for free, educational use to be fair.
- APS has sole authority to grant permission for use of its copyrighted materials to parties other than the author. APS acts as a central clearinghouse in this regard without requiring further permission from its authors.

Reproduction of Printed Materials

- Beyond what is allowed by fair use, APS allows reproduction of complete individual journal articles and book chapters upon receipt of established reproduction fees.
- Currently, permission to reproduce materials is obtained either in writing directly from APS or through the Copyright Clearance Center (CCC) following registration of a given publication. Since 2004, APS has also offered individual articles and chapters for a per-item fee.
- Rights to reproduce complete journal articles are granted gratis for use in teaching
according to policies of fair use. APS PRESS may or may not charge for use of its materials in teaching depending on the extent of the request and whether the materials are from works intended as textbooks or course references.

Licenses for Digital Materials

- All APS copyrighted materials in digital form, whether fixed or online, are governed by specific license agreements. Fixed digital publications are those for which the method of distribution is by delivery of a physical object, such as a DVD-ROM. Online digital publications are those for which delivery is by the Internet or another computer network.
- Various types of licenses exist, such as single-user, member, institutional, and network. Member and single-user licenses typically identify the licensee as the individual person who purchased the work or initiated its purchase through his or her institution. Institutional and network licenses allow use to multiple users of either a limited number or limited distribution area. Network and institutional licenses may allow access via the Internet or another external network or via an organization’s own local area network.
- In general, the licenses that govern APS digital materials prohibit copying, sharing, and distributing electronic files in whole or in part. However, certain digital materials, such as the APS Image Database, are published with the intent of providing source material for use in projects of the individual licensee and are priced accordingly. Such use is allowed only for the duration of a valid license period and is limited to the licensee’s personal, noncommercial work and teaching. Use by persons or institutions other than the licensee or by the licensee in commercial works requires written permission from APS and payment of any associated fees.
- All APS licenses for digital materials prohibit the user from posting any of its content on the Internet or another external network. However, APS will grant written permission for teaching purposes provided the material is posted only during the duration of the associated class and access is restricted to students of the class.
- Most online publications that require fees are licensed by an annual subscription. Such a subscription typically allows access to the current-year edition and any available back editions. During the user’s subscription period, he or she may make permanent copies of the material for his or her ongoing personal use but not for distribution.

Permission to Reproduce Materials in Other Works

- Over time, APS PRESS has amassed an extensive collection of plant disease materials. In so doing, APS has become a convenient source of images, figures, tables, and the like for use in publications of other organizations. Through its members and publishing efforts, APS adds value for these organizations by eliminating the considerable time and expense needed to locate or generate images and other materials and the additional time needed to screen, select, and verify quality.
- Except when stated otherwise, any party that wants to reproduce materials copyrighted by APS must obtain permission to do so in writing.
- Typically, APS does grant permission for use of its materials. Terms of use require proper crediting of the source (including for an image, the name of the contributor), reference to APS’s copyright ownership, and payment of any established permission fees. In
considering a permissions request, APS may disallow use if in its view the quality of reproduction is not sufficient, the materials constitute an unreasonable portion of the other work, or the use may be contrary to the purposes of APS.

- A separate permission fee is required for each publication in which an image, figure, or table may appear. Fees will be based on whether the publisher is a nonprofit versus a for-profit organization and factors such as one-time or unlimited use; publication medium or media; and territorial and language rights. Fees will be charged for providing image files, and fees may be charged for research involved in fulfilling a permissions request. Fees may be waived by the chair of the APS Publications Board or by the editor-in-chief of the specific publishing area. Depending on the item, fees will be reviewed periodically either by APS PRESS or by the Publications Board with the Financial Advisory Committee’s oversight.
